SAKATA INX CORP.

SAKATA INX Group
Scored B in "Climate Change" and A- in "Water Security" category

SAKATA INX CORPORATION (Headquarters: Chuo-ku, Osaka City; Yoshiaki Ueno: Representative Director President & CEO) announces that it has scored B which corresponds to management level in the climate change category for the second consecutive year, and has scored A- which corresponds to leadership level in the water security category for the first time.

The Carbon Disclosure Project (CDP), a non-governmental organization established in the U.K. in 2000, sends questionnaires to companies, local governments, etc. around the world requesting disclosure of environment-related information, and uses the answers to evaluate the response to environmental issues. Over 24,800 companies around the world disclosed data through CDP in 2024, representing over 66% of total global market capitalization.

CDP rates companies' environmental initiatives on an 8-point scale (A, A-, B, B-, C, C-, D, D-), with our group scoring in the top 3 in the "Climate Change" category and in the top 2 in the "Water Security" category.

The SAKATA INX Group has set "activities to maintain a sustainable global environment" as one of its materiality issues, and is promoting activities related to climate change and preservation of natural environment (responding to TCFD, TNFD, etc.). In 2023, we expanded the GHG reduction target to the entire group, and set a water consumption reduction target for the company alone. We are actively working to reduce GHG emissions and water consumption.

We will continue to promote appropriate information disclosure on climate change and natural capital. We will strive to realize a sustainable society and enhance corporate values, and will further promote sustainability initiatives throughout the SAKATA INX Group.
